5 Ways to Avoid Knee Injuries

Top 10 Trails to Hike in Utah

Goal Statement:

- **Value your time**

We make every effort to ensure that your appointments are scheduled to work best for YOU and that WE are on time.

- **Get to Know You**

We care about you as a person, not just a PT

- **Communicate Clearly**

We always keep you and your physician informed of the progress with your POC

- **Provide a Comfortable Atmosphere**

You can count on a clean and supportive environment each time you visit

PATIENTS ENTER TO WIN!!

Find the misspelled word in this newsletter and call 801-896-9200 for your chance to win a

\$10.00 gift card!

Contest for past and present patients only.

FROM YOUR PHYSICAL THERAPIST: BRANDON HEPNER

Aches and pains in the knee are common and often easily dismissed. There are many common overuse injuries in the knee that involve the kneecap, muscles and tendons that surround the knee, or the joint surfaces themselves. Osteoarthritis is well known and one of the more common problems as we age. This is a progressive condition that slowly wears away the joint cartilage that provides a cushion between the two bones. It begins innocently with a twinge or mild pain after prolonged activity, but it worsens over time and the frequency increases.

This is when you are at a crossroads so to speak. You can start to limit your activities, giving up things you love to do so that you are not in as much pain, or, you can take care of the problem. This involves getting the correct exercises and information to slow the progression of the arthritis. The earlier in the process you start the more likely you'll be successful. Low load, high repetition exercises will help the joint heal, move better, and be less painful. It is also important to look at the feet and hips as knee pathology can be worsened by weakness or poor alignment above and below the knee.

If you do end up having to have surgery, all is not lost. The exercises that you did before surgery will actually help you heal and recover faster. People who do physical therapy and exercises prior to knee surgery are able to walk better, faster, use stairs sooner, and are in less pain after surgery than those who don't. When you call our clinic, we conduct a detailed evaluation and design a physical therapy program to reduce pain and inflammation and improve function. Treatment and management plans will depend on the level of deterioration, but will focus on restoring strength, motion and stability in the knee.

Want more information? Sign up for the Knee Workshop on June 24th at 10:00 AM at our Syracuse location! It's totally free, but seats are limited – we only have 25 spots and they will go fast. We are offering this through our newsletter to our past patients FIRST. BUT, on June 10th we will open it up to the public (if there are still seats) so don't delay.

To Register follow the link below. It is easy and fast!

CATCHIN' UP WITH BRANDON

Just a few weeks ago, my 18 year old son, Dallas, received a call to serve an LDS mission in the California Los Angeles Mission! He will be serving using American Sign Language and leaves for 2 years on June 14th. Good Luck Dallas!

PATIENT TESTIMONIAL

In January 2017, Steven had his left knee replaced and chose Rock Run to get him back to doing the things he loves to do. When we first saw Steven, he was walking with crutches and was in a lot of pain. He was unable to bend his knee very far and was having difficulty getting up and down from chairs, walking, and doing stairs. After only 6 weeks working on his left knee, Steven went back to surgery and had the other knee replaced. So, once again he was back to square one; walking with crutches and having difficulty with basic activities again. Because Steven was the ideal patient that came to therapy faithfully, and worked hard on his home exercise program, we were able to send him on his way only 6 weeks post-surgery. He was walking without any type of assistive device, had very good range of motion, and was able to go up and down stairs, squat, and walk without pain.

Here's what Steven had to say about his experience at Rock Run: "Great Experience that exceeded expectations. I had both knees replaced only 6 weeks apart. Physical therapy started one week after surgery on both knees and after only 12 visits on my last knee, they now feel GREAT. Staff is great. Loved coming here and meeting everyone. Awesome atmosphere."

Way to go Steven!!!

PHOTO CONTEST WINNER

Congratulations to Jeff Leavitt, this issue's winner of the Photo contest! Jeff took his copy of the Rock Run Revue to Universal Studios! He won a \$50.00 gift certificate!

The contest will go again for the next issue. Remember the rules:

- Take a picture with your Rock Run Revue somewhere, anywhere... on vacation, at a ball game, in your backyard, with your favorite animal, etc...
- Submit the picture with your name via email at photo@rockrunpt.com or text it to 801-698-4156
- Cross your fingers! It's that easy!

PHYSICAL FITNESS AND SPORTS MONTH

Did you know that the Month of May is considered “Physical Fitness and Sports Month”?

The president’s council on Fitness, Sports and Nutrition challenges all adults to get 30 minutes of physical activity every day. Did you know that regular physical activity increases your chances of living a longer, healthier life? It also reduces your risk for high blood pressure, heart disease, and some types of cancer. Yet, in Utah, nearly 44.7% of the adult population isn’t getting the recommended amount of physical exercise each week.

The Physical Activity Guidelines for Americans recommend that adults:

Aim for 2 hours and 30 minutes of moderate aerobic exercise each week. Moderate activity includes things like walking fast, dancing, swimming and raking leaves. They also recommend muscle-strengthening activities like; lifting weights or using exercise bands-at least 2 days a week.

No matter what shape you are in, you can find activities that work for you!

5 WAYS TO AVOID KNEE INJURIES WHILE RUNNING

In 2009, orthopedic surgeon, Dr. Kevin Plancher was interviewed regarding knee injuries and how to prevent them. He says, “As many as 70 percent of runners may experience knee injuries at some point in their lives. Just because you’re a runner doesn’t mean you’ll have runner’s knee or any other knee injury. These problems are typically caused by overuse or by misalignment of the joint that is exacerbated by improper running habits- all things that can be avoided.”

He came up with a list of 5 tips to help prevent knee injuries while running.

1. Wear the right shoes- Runners need to find a shoe that fits correctly. Be sure to find one with the proper support and width for your foot.
2. Always stretch- Don’t underestimate the importance of stretching. It is necessary before any run whether long, short, fast or leisurely.
3. Cross train- Plancher recommends runners add core-strengthening workouts to their routine that strengthen both the front and the backs of the thighs, as well as the muscles of the hips and buttocks.
4. Don’t overdo it- Don’t take on too much too soon. Plancher recommends starting out slowly and building your way back up to the longer runs.
5. Eat right, supplement wisely- Runners need the right types of nutrients in order to maintain healthy joints. Dark Green vegetables and dairy products are the best source of calcium, additionally, runners should take glucosamine and chondroitin to repair cartilage.
